Preface vii

Sponsors and Committees viii

Stress analysis

Plastic flow and shakedown of the rail surface in repeated wheel–rail contact 1
A. F. Bower and K. L. Johnson (Cambridge, U.K.)

Effects of non-linear kinematic hardening on plastic deformation and residual stresses in rolling line contact 19
D. L. McDowell (Atlanta, GA, U.S.A.) and G. J. Moyar (Downers Grove, IL, U.S.A.)

Analysis of edge effects on rail–wheel contact 39
M. T. Hanson (Lexington, KY, U.S.A.) and L. M. Keer (Evanston, IL, U.S.A.)

Contact region fatigue of railway wheels under combined mechanical rolling pressure and thermal brake loading 57
R. Lundén (Gothenburg, Sweden)

Rolling contact fatigue

The effect of metal removal, steel cleanliness and wheel load on the fatigue life of rail 71
R. K. Steele (Chicago, IL, U.S.A.)

Investigation of rolling contact fatigue in a head-hardened rail 89
V. Dikshit, P. Clayton and D. Christensen (Beaverton, OR, U.S.A.)

The early detection of rolling–sliding contact fatigue cracks 103
J. E. Garnham and J. H. Beynon (Leicester, U.K.)

An analysis of the thermal contributions to railway wheel shelling. 117
G. J. Moyar (Downers Grove, IL, U.S.A.) and D. H. Stone (Chicago, IL, U.S.A.)

Rolling contact fatigue in railway wheels under high axle loads 139
P. J. Mutton and C. J. Epp (Mulgrave, Vic., Australia) and J. Dudek (Port Hedland, W.A., Australia)

Corrugation

Surface analysis of corrugated rail treads. 153
H. G. Feller and K. Walf (Berlin, F.R.G.)

Rail corrugations: analytical model and field tests 163
E. Tassilly (Paris, France) and N. Vincent (Dardilly, France)

The formation of wear patterns on rail tread 179
K. Hempelmann, F. Hiss, K. Knothe and B. Ripke (Berlin, F.R.G.)

Investigation of rail corrugations on the Baltimore Metro 197
D. R. Ahlbeck (Columbus, OH, U.S.A.) and L. E. Daniels (Herndon, VA, U.S.A.)

Wheelset–track resonance as a possible source of corrugation wear 211
W. F. Hayes and H. G. Tucker (Ottawa, Ont., Canada)

Effects of vibration system and rolling conditions on the development of corrugations. 227
Y. Suda (Tokyo, Japan)

Elsevier Sequoia/Printed in The Netherlands

Materials and wear

Wheel–rail rolling contact theory 243
J. J. Kalker (Delft, The Netherlands)

Tribological studies on adhesion phenomena between wheel and rail at high speeds. 263
T. Ohyama (Tokyo, Japan)

Factors of wheel flat occurrence and preventive measures 277
N. Kumagai (Tokyo, Japan), H. Ishikawa (Saitama, Japan), K. Haga and T. Kigawa (Tokyo, Japan) and K. Nagase (Ishikawa, Japan)

A finite element and fatigue threshold study of shelling in heavy haul rails. 289
A. K. Hellier and M. B. McGirr (Kensington, N.S.W., Australia) and D. J. H. Corderoy (St. Lucia, Qld., Australia)

Shear mode crack growth and rolling contact fatigue. 307
P. E. Bold and M. W. Brown (Sheffield, U.K.) and R. J. Allen (Derby, U.K.)

Metallurgical improvement of rail for the reduction of rail–wheel contact fatigue failures 319
K. Sugino, H. Kageyama and C. Urashima (Kita-Kyushu, Japan) and A. Kikuchi (Tokyo, Japan)

Wheel–rail profiles

A design methodology for wheel and rail profiles for use on steered railway vehicles. 329
R. E. Smith (Kingston, Ont., Canada) and J. Kalousek (Vancouver, B.C., Canada)

Prediction of wheel profile wear 343
T. G. Pearce and N. D. Sherratt (Derby, U.K.)

Development of freight car wheel profile — a case study. 353
J. F. Leary, S. N. Handal and B. Rajkumar (Pueblo, CO, U.S.A.)

Design of rail head profiles with full use of grinding. 363
Y. Sato (Tokyo, Japan)

An optimization technique to minimize rail contact stresses 373
R. Smallwood, J. C. Sinclair and K. J. Sawley (Derby, U.K.)

General discussion 385

Author Index 395

Subject Index. 397
